Geospatial Information Science

: The broad domain of Geospatial Information Science includes both scholarly inquiry into various aspects of spatio-temporal information as well as the application of GIS technology to attain solutions to real-world problems.

Coordinator of the Certificate Program in Geospatial Information Science:
Richard G. Lathrop, Department of Ecology, Evolution & Natural Resources
Phone: 848-932-1580 Fax: 732-932-2587 Email: lathrop@crssa.rutgers.edu

Participating Faculty:
R. Lathrop, Ecology, Evol. & Nat. Resources
M. Meixler, Ecology, Evol. & Nat. Resources
K. St. Martin, Geography
L. Schneider, Geography
D. Tulloch, Landscape Architecture
L. Wiggins, Urban Planning & Policy Development

More information on the Geospatial Information Science Graduate Certificate Program is available on-line at:
> crssa.rutgers.edu/courses/gradcert.html

Students may also be interested in pursuing the Geospatial Information Systems & Technology Program offered as part of Rutgers University’s Master of Business and Science:

Graduate Certificate Program in Geospatial Information Science

Three foci define research in geospatial information science:

1. One strand of research addresses the fundamental questions of the human conceptualization of space and how geospatial information is generated, located, recorded, modeled, manipulated and/or communicated through computer technology.

2. A second strand of research addresses how geospatial information science and technology can be applied to real world problems across a variety of physical, environmental, and social science disciplines.

3. A third strand of research investigates the societal implications of GIS technology on social interactions on a variety of levels, e.g., people to the environment, people-to-people, and people-to-government.

The certificate program is designed to introduce students to these three strands of research, as well as provide the students hands-on training in the technology so that they may apply it in their disciplinary areas of research.

Coursework

Prerequisites
Proficiency in computer programming, introductory cartography, geographic information systems, and basic statistics. If this proficiency is lacking, we recommend the appropriate undergraduate courses be taken:
- 01:198:111 Introduction to Computer Science (3)
- 01:450:355 Principles of Cartography (3)
- 34:970:591 Introduction to GIS for Planning (3)
  or 11:372:362 Intermediate Environmental Geomatics (3)
- 01:960:401 Basic Statistics for Research (or equivalent) (3)

Basic Topics in Geospatial Information Science (6 cr.)
One course each in geographic information systems and remote sensing as prerequisite for the Certificate seminar:
- GIS:
  - 34:970:592 Topics in Geographic Information Science (Bloustein) (3)
- Remote Sensing/Digital Image Processing:
  - 16:450:615 Seminar in Remote Sensing (3)
  - 11:216:371 Introduction to Remote Sensing (3)

Prospective Students: How to apply
Students interested in geospatial information science and applying to Rutgers University for graduate study should contact the graduate program that most closely aligns with their education/career goals. Prospective students are also encouraged to contact individual faculty members for more specific information on their research programs.

Present Students: How to enroll
Graduate students interested in completing the Graduate Certificate Program need to officially enroll in the program. For more information or to enroll in the graduate certificate program, contact Professor Richard Lathrop (contact information can be found on the back of the brochure).

Certificate Seminar
16:455:501 Seminar in Geospatial Info. Science (3)
This seminar will address the three foci that define research in geospatial information science: 1) human conceptualization of space as it relates to geospatial information; 2) applications of geospatial information science and technology; and 3) societal implications of GIS technology.

Advanced Topics in Geospatial Information Science (3 cr.)
One course from the list below:
- 16:194:601 Info. and Communication Processes (3)
- 16:198:535 Pattern Recognition and Theory (3)
- 16:198:541 Database Systems (3)
- 16:215:520 Landscape Ecology (3)
- 16:332:484/560 Introduction to Computer Graphics (3)
- 16:375:551 Remote Sensing of the Ocean and Atmosphere (3)
- 16:450:605 Seminar in Land Use Change (3)
- 16:450:617 Remote Sensing of the Biosphere (3)
- 16:712:615 Geophysical Data Analysis (3)
- 17:610:557 Database Design & Management (3)
- 34:970:650 Planning Support Systems (3)
- 34:971:314 Graphic Communication for Planning (3)
Alternative courses can be substituted with permission of the Certificate Director.
